Is Poor Quality Water Affecting Your Turf?

Carbonate deposits can build up in soil as a result of poor irrigation water quality; causing sealing of soils and reducing the effectiveness of irrigation, fertilization, and chemical programs.

Blast Injectable™ is a unique acid formulation combined with Synergy Technology™. It safely dissolves carbonate build-up in the soil, rapidly opens soil pores for better infiltration and percolation of water, and frees up calcium, magnesium and other bound nutrients. **Blast Injectable** gives you a healthier growing environment and better turf.

- Specifically designed for injection through an irrigation system
- Patented Synergy Technology ensures improved penetration, distribution and availability
- Frees up calcium, magnesium, and other essential nutrients in the soil
- Opens soil pores for better water movement

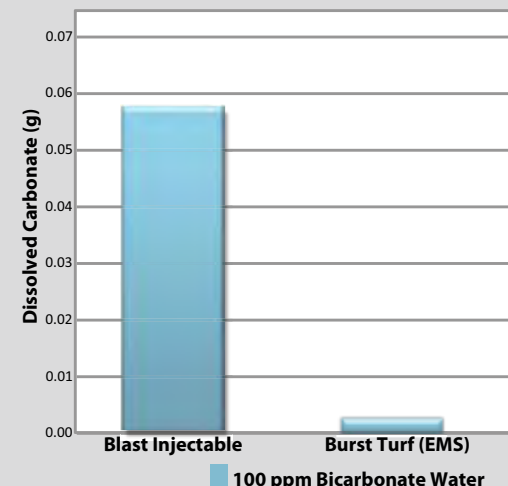

Application and Use

Inject **Blast Injectable** at a rate of 1-2 gallons per acre (10-20 L/ha) monthly or as needed. For best results inject on a night when applying lower volumes of water. For more severe conditions, inject 2 gallons per acre (20 L/ha) every other week until the conditions improve. Then maintain conditions by applying 1-2 gallons per acre (10-20 L/ha) monthly or as needed.

Aquatrols Patented Synergy Technology is an advanced soil surfactant which improves penetration, reduces run-off and improves product performance.

***Blast Injectable** dissolves more carbonate than other "safe" acids in both pure and 100 ppm bicarbonate water.*

Soil & Water Quality Management Solutions

from  **Aquatrols®**

Aquatrols, the world leader in turfgrass water management, offers a complete range of products to help solve soil and water quality issues and to help manage plant stress. We provide solutions for the most difficult salt, sodium and carbonate problems.

Which one is right for you?

Aquatrols strongly recommends soil and water tests to ensure accurate diagnosis, so we can help you find the best agronomic and most economic solutions to your turfgrass management problems.

Aquatrols' patented Synergy Technology is an advanced soil surfactant which improves penetration, reduces run-off and improves product performance.

AQUAPLEX amino

AquaPlex amino™ is a sprayable osmotic regulator that will help enhance your turf's natural ability to manage stress and tolerate high EC environments. **AquaPlex amino** works within the plant to improve water and nutrient uptake by balancing osmotic potential and minimize the impact of stress caused by high EC.

AQUAPLEX Ca

AquaPlex Ca™ is a new liquid calcium treatment that provides readily available soluble calcium with an organic calcium solubilizing agent and patented Synergy Technology™.

SPRAYABLE

INJECTABLE

Blast™ is a unique acid formulation combined with Synergy Technology™. It safely dissolves carbonate build-up in the soil, rapidly opens soil pores for better infiltration and percolation of water, and frees up calcium, magnesium and other bound nutrients. **Blast** gives you a healthier growing environment and better turf.

CALTRISAL ST

Caltrisal ST™ is a unique organic acid formulation that improves the solubility of gypsum by up to 40% for better performance. It also aggregates clay soil particles which improves structure and increases porosity for better water infiltration.
